

Integration

Introduction

The iVvy - Xero integration enables clients to synchronise their iVvy invoices with Xero, daily. Once configured, an "iVvy Contacts" group will automatically be created within the Xero system. Each contact that has been assigned an invoice in iVvy, will then be added to that group within Xero.

How it works

Mirror image
line items from
iVvy to Xero

Key features

- Available for both the iVvy Venue and Events Software users.
- Users of the iVvy Venue Software have the ability to sync paid, unpaid and cancelled invoices from iVvy to Xero - the extension provides a mirror image of line items from iVvy in Xero.
- Users of the iVvy Events Software are able to sync all paid invoices from iVvy into Xero, as well as cross reference invoices in iVvy with invoices in Xero. The integration also supports partial payments.
- Users of both the iVvy Events and Venue Software can sync their invoices daily.
- Automatically create an iVvy contact group in Xero from iVvy contacts.
- Users of the iVvy Venue Software can opt into 'drafts' rather than approved invoices so the Xero user can assign multi line-item ledgers to the invoice before approving.
- The integration ensures no duplicate payments appear for users with a bank feed.
